Safety at Buist Electric

At Buist Electric, our policy is to ensure a safe and healthy workplace for all employees. Part of our company mission is to “consider our employees well-being as essential.” Safety is an integral part of our overall culture at Buist Electric. We believe in hiring people who genuinely care about themselves, their co-workers, and the company.

Together, Buist Electric management and our company leadership team provide top-level safety support, measure safety performance, and regularly review the company safety program to ensure its effectiveness. We make safety a priority; not just to protect the well-being of employees, but also the well-being of our trade partners, customers, and members of the community in which we serve. Management conducts routine Jobsite Safety Observation Inspections, along with our full-time Safety Director, to praise good practices, or identify and correct any safety related issues. The company solicits leading indicator feedback through our Near Miss program. All employees are highly encouraged to submit Near Misses should they experience one. In addition to these measures, Buist proactively addresses safety through our extensive employee safety training. Employee training is accomplished in a few different ways. New hire safety training is conducted both in a classroom and through hands on training at employee orientation. Ongoing employee safety training is accomplished through hands on training and our monthly Buist Safety Scoop Program. Safety inspections, Near Miss Reports, and Safety Scoops are all completed through the Buist employee app and help to proactively monitor and improve jobsite safety.

Site supervisors are responsible for day-to-day on-site safety. They provide plans and equipment to accomplish all jobsite work in a safe manner. Field employees work with managers and site supervisors to ensure work can be performed safely. Employees are to perform work in a safe manner, utilizing the proper tools and Personal Protective Equipment. All employees have the right to stop work should a condition become unsafe or if equipment is damaged/defective. Buist Electric has a designated Safety Committee made up of managers and field employees from various company departments. This team meets bi-monthly to discuss any company related safety matters, identify leading indicators, and review any past incidents. Safety related matters are communicated out to the company via email or company app notification and posted on the employee app. Types of information communicated may include any corrective action or recommendations related to Near Miss reports, incident reports, employee injury reports, Safety Committee minutes, any upcoming training opportunities, and so on.

These are a few methods through which Buist Electric strives to promote and continuously improve employee safety. It takes all members of the Buist team working together to ensure the safety of our company.
